

Iván Muñoz Ruiz

Product Engineer

Málaga, Spain / ivan.sazo@gmail.com / ivanmr.dev / github.com/ivanmunozruiz

PROFILE

I design, build and operate complete digital products across mobile, web, APIs, data, infrastructure, AI and payments. ScanCal, ContentDrop and Cuotia are in production and used by real users.

PRODUCTS IN PRODUCTION

■ ScanCal

scanca1.app

A mobile nutrition product combining AI food scanning, coaching, personal projections, subscriptions and health integrations.

- Background scan processing that resumes when users return to the app.
- AI provider selection and fallback, with operational metrics for usage, latency and success.

React Native / Go / PostgreSQL / Redis / RevenueCat / Prometheus

■ ContentDrop

contentdrop.app

A SaaS platform for brands combining AI content generation, Instagram management, calendars, approvals, analytics and billing.

- Content generation protected by plan limits and background processing.
- Deduplicated historical Instagram imports and best-time analytics.

Next.js / Go / PostgreSQL / Redis / Async / GCP / Stripe

■ Cuotia

cuotia.com

An app for managing subscriptions, upcoming charges, goals, reminders and saving decisions.

- Offline use with cloud synchronization for Pro accounts.
- Forecasts and recommendations focused on concrete saving decisions.

Expo / Go / PostgreSQL / SQLite / RevenueCat / Notifications

CAPABILITIES

Mobile	React Native / Expo
Web	Next.js / React / Tailwind
Backend and data	Go / PHP / Symfony / Python / FastAPI / PostgreSQL / MongoDB / Redis
Infrastructure	GCP / Kubernetes / Prometheus / Sentry / RabbitMQ / Async
Product and business	AI integrations / Stripe / RevenueCat / OAuth / Feature flags

APPROACH

Real products, not demos / Complete systems from end to end / Operations and observability by design
